is a program for producing, managing and printing layouts for laser printers, ink jet printers, and copiers that uses the same specification as Adobe's PostScript or PDF standards. It also includes vector drawing tools for designing and modifying vector images. AutoCAD has a number of interfaces to other CAD packages. These include a DDE protocol, a Cobol API, SQL (with

SQL-OLEDB), a DDE interface, a Microsoft DAO, a RMI interface, an MDB interface, a COM interface, an ADO.NET interface, a Java API, and a Web Services API. AutoCAD also has a WSDL Web Services interface, an XML Web Services interface, and a .NET SDK. Some of these interfaces were introduced with AutoCAD 2007. AutoCAD can import or export DWG files to both DXF and 2D Draft files. The latter was introduced in AutoCAD 2006. It can import DXF, DWG, DWF and DWF. Starting from AutoCAD 2016, creating a new drawing in AutoCAD is as simple as pressing a few buttons. This also applies to new projects, as well as revisions of existing drawings. AutoCAD 2016 can open and save a new drawing from almost anywhere on your computer. The new drawing is automatically synchronized with your computer and can be edited later from any source. Design Manager Design Manager is a utility in AutoCAD and AutoCAD LT that allows users to produce editable or non-editable drawings. It can export CAD models in DXF, DWG, DWF, DWV, and DWX formats, and import AutoCAD DWG, DWF, and DXF formats. Design Manager also allows users to preview models, convert them to other formats, and share them over the Internet. A "design manager" is a term used in the CAD field to refer to the class of application programs that allow creation of editable and non-editable drawings and that can export the drawings to standard DWG, DWF, DXF, and other formats. Design Manager refers to a specific design manager application, which can be found on the Applications menu in AutoCAD LT and AutoCAD. Open Modeling is an open-source design manager that was developed from the Open Modeling Consortium. Computer-aided drafting and engineering (CAD/CAM) systems AutoCAD AutoC a1d647c40b

What's New in the AutoCAD?

Markup Assist is a tool that lets you track changes in your drawings and generates replacement drawings automatically to assist you in the drawing process. **IMPORTANT:** Markup Assist doesn't create original drawings. It generates documentation only. The process of replacing symbols and CAD data is completely automatic. **Dynamic MIP Generation:** Build a master model and design complex models quickly and easily. Just use the dynamic MIP tool, and AutoCAD can intelligently create a MIP (master model) of the model you draw and use it for the entire model's complexity. (video: 3:40 min.) AutoCAD supports multi-model design, and the dynamic MIP can create a MIP of a model as you draw it. AutoCAD can also intelligently change the model and update the MIP automatically. **Intelligent Push/Pull:** This new feature lets you push and pull groups of entities using a single command. You can select a sequence of entities, group them, then drag the group or select a point in it, and the selected entities are automatically pushed and pulled. (video: 1:15 min.) In the past, to push and pull a group of entities you had to select the entities, and then press P to push and then select the desired destination point, and press G to pull. **Canvas Properties:** This new tool helps you find out what properties are set on the canvas, and it is very helpful for quickly finding a property in a long list. And another new tool: **Data-Range Filter:** With the Data-Range Filter you can quickly analyze and filter any table of data in your drawing to find the information you need. Use the filter to find specific entities or entities in a range, and if there is more than one range, you can select multiple ranges simultaneously. For example, you can filter CAD tables to find data from a specific date or time and find all components with a material number between 10 and 20. **Finding Unique Items:** Use the new Unique Entity Finder to find and tag unique entities in your drawings. With this tool you can quickly identify whether an entity is unique or not. It can search through all entities in your drawing to see if an entity is already unique. **Faster Object Tracking:** Stay focused on your design with better object tracking features
