I want the data from the input to be displayed in lists as per the instructions in the html file. Example: write hello then write world output:

### What's New in the?

AutoSnapping: Intuitively snap, place and cut even the most complex geometry. From an exact copy of a prototype to an incredible freehand drawing, all is possible within the constraints of your software. (video: 1:40 min.) Part-based Design: Freehand sketches that come to life with precise placement, editing and collaboration. Create precise parts that are editable from anywhere in your drawing and share with others. (video: 1:00 min.) Expanded Dynamic Element Creation: Create further complexity with geometrically accurate, flexible parts that change with your work. (video: 1:30 min.) Content-aware improvements: Discover content changes that you've missed on objects that you've already drawn. In addition, shape content such as fill can now change when you select the fill area. New Documentation: In addition to our library of over 350 AutoCAD videos, we've added a new library to help you find your way around the new features. A new command-line interface (CLI) provides seamless integration into batch scripting and applications. It can also be used to extend AutoCAD with new commands, custom functionality, and filter options.
