What's New In AutoCAD?

Use the tools and functions of the AutoCAD Markup Assistant to mark the dimensions of objects, the location of views, and other drawing details, as well as to fill, label, and tag shapes, symbols, and text in your drawings. If the drawing has a built-in AutoCAD Markup Assistant, you can also use the Markup Assistant in Edit mode to quickly add new geometry. (video: 1:47 min.) Improvements to the dimensions, labels, and text drawing tools allow you to place marks anywhere on a drawing. Make views, labels, and text bold or italic, and adjust the distance between marks. Add dimensions to lines, arcs, and text, and orient them with your drawing. Make them arbitrary or non-zero. Manually edit dimension units. Draw clean, crisp lines, regardless of the dimensions or text. Adjust the values of dimensions, lines, and text. Specify alignment options for text, viewports, and blocks. Type scale factors or whole numbers to set them. Use View options to see every line or box in the drawing with its bounding box visible. Show or hide blocks and lines individually to focus on your drawing. Show or hide individual edges and faces. See how a view affects a drawing. Use your drawing space or other views to identify and change your view. Take advantage of the new default view and defaulted settings for new drawings. Edit mode: Unlimited editing tools: Use the erase, select, and modify tools to quickly make changes to your drawings. Choose erase mode to erase a path or shape or start a new one. Choose select mode to select parts of the drawing, and then use modify mode to edit the selection. Apply edits to one or many shapes or parts of shapes. Seamless insertion and deletion of views: Use the extrude and bevel options to add views to your drawings. In addition, use the snap and align options to help you keep a drawing organized. Add, change, and delete views from within blocks or lists without having to redraw your drawing. In block views, use the new drag-and-drop, pane-to-pane, and Snap To Grid & Data options to quickly add or move views to or from a block. In List views, use the new move command to add or remove views from the list. Snap to blocks: You can use the Snap to Block option to make edits based on
