Adobe offers training courses and a five-day introductory course to get you started in how to use Photoshop. Photoshop has also spawned a number of image editing and website creation programs, which are based upon the same technology and are available for free on the Web. Types of Photoshop Files Photoshop can work with a range of different file types. If you are using Photoshop to create raster images, it is important to work with a file format that is compatible with your printer. PSD (Photoshop Document) This is the standard for Photoshop. The PSD file format is open and can be opened by just about any program. It's a large file that can be huge. The file size may be 300K or more in the.PSD format. PSD files are generally a flat, raster-based file with an alpha channel. The alpha channel enables transparency between layers. Photoshop also supports layered files. This format is smaller than PSD files but larger than a JPEG or TIFF file. When working with layered files, most artists create a.PSD file as a base and then convert it to a.PSB (Photoshop Batch) file, which is a compressed and layered file. This makes the conversion process easier because it builds a new.PSB file from the original PSD file. Photoshop uses the JPEG (Joint Photographic Experts Group) image format for most files, although it supports a wide variety of image formats, including TIFF, PNG, and GIF. Photoshop can import image formats and create them from the format's controls. Creating a Photoshop File Like many other software programs, you must use a specific type of file to create an image in Photoshop. For images or materials, you should use PSD files. Photoshop itself does not create a file format. You choose one by clicking the File command in the menu bar (Figure 1.1). Figure 1.1 Some file formats for Photoshop. If you are working in Photoshop Elements, choose Save As File from the File menu and select another file type from the file format submenu. Although it is easy to choose a file format, it is best to create Photoshop files in the format that your printer or publisher uses. This way, the file format is chosen before it is sent to the printer or software publisher. The Photoshop file format creates a large file that can range in size from 300K to
