Docx2TeX is a tool that converts Word 2007 documents into LaTeX. It was created for people who want to use Word 2007, but don't have TeX installed. Docx2TeX does not modify the user's original Word document, it remains untouched. On the contrary, it creates a new.tex file that can be viewed with a number of TeX viewers. Word files must be saved in the OOXML format, not in Word 2003 or earlier formats such as ODF. Docx2tex can handle formatting such as tables, lists, text frames, styles, and all other components of Word 2007. When creating the LaTeX file, docx2tex will create a format that runs more robustly on your computer. Docx2TeX is a command line tool. That means it requires a command line, or shell. Docx2TeX can be run from a command line in Windows, or from a shell in Linux. Docx2tex requires the Microsoft Foundation Classes (MFC). This is a library of objects and functions that make it easy to write applications for the Windows operating system. Support for the Docx2TeX command line tool is available for Linux. You can download the GNU tool from the GNU site. Furthermore, you can read how to install LaTeX in the Debian site. The command-line document, which lists all options that can be used while executing docx2tex, is available at the official site. Dana Conclusion: Docx2TeX is a small but powerful tool that gives you the opportunity to produce publications that can only be achieved by using Word 2007, without requiring TeX. Docx2TeX supports: Handling of tables, lists, text frames, styles, and all other components of Word 2007 Converting DOCX files that don't support CSS to PDF or PostScript Support for the PDF, PostScript, and Microsoft Encapsulated PostScript (EPS) formats Docx2TeX is available for Windows for free. It can be used for both small and big projects that involve type. The original.doc files can be viewed with Word 2007 or higher. Docx2TeX is a replacement for the TeX LaTeX and uses Microsoft Foundation Classes. Docx2TeX won't create a new document but will instead create a new document to replace the original. Dana Description is a video post-processing software that lets you add image / video effects, change video / image resolution, compress video, set video / image bit rate and remove unwanted transitions. In addition to that, Dana Description can also help you automatically sync the audio and video of your media files. User-friendly interface The Dana Description program has a clean, clutter-free interface, which is made up of four main tabs which each offer different functions: Video Effects – This tab of the software offers different image effects, such as lens-correction, local contrast, color correction, crop, frame, split and combine, or x-ray; Video Resizing – This tab lets you resize your original videos to different and adjustable dimensions; Audio Sync – This tab enables you to automatically synchronize your audio and video; and Dana Settings – This tab allows you to adjust the audio and video post-processing as you see fit. Conclusion You can easily assign different customized presets to different types of projects, for example, the presets located under the Video Effects tab are ideal for posting on social networks; the ones located under the Video Resizing tab are ideal for home-based editing, and so on. Video wallpapers There are many ways to create video wallpapers, but the one that is considered the best is by creating a slideshow from your video footage. The idea is that you edit your video in batches and then add it to a slideshow, which will create your video wallpaper. Well, I decided to give this slideshow software application a try. But I encountered a couple of design flaws which prevented me from feeling very comfortable using it. Searching for a programmable slideshow application When I first started tinkering with Picture Frame, I did not know what I was looking for. What I was hoping to be able to do was merely edit my video file and add it to a slideshow. And that was pretty much all. I was expecting this particular software to have a feature set which would enable me to perform just that: add my video to a slideshow. Unfortunately, this is not the case. Instead, I found myself stuck with a couple of limitations, one of which was the inability to add multiple videos in the slideshow. Another one was that it was pretty much impossible to add an individual title to the image. As a result, I had to rely on the photos of my family members, who looked super uncomfortable in front of the camera. Un
