Elements is the sister program to Photoshop that works in a similar way, but has fewer features and is geared toward beginners. You can still use this program to perform basic edit functions and learn Photoshop. For more about creating images and videos with Elements, check out Book II, Chapter 5. Restoring and reusing images Another way to improve image-editing skills is to practice enhancing and restoring images. We tell you how to do so in the following sections. Reusing images The wonderful thing about digital photography is that your edited photos are already saved. So instead of having to recreate those photos from scratch, simply reuse them. To find images that you can reuse, look through your images and press Ctrl+C (Windows) or Command+C (Mac) to copy them to the clipboard. Then you can paste them into any project where you need them — Web pages, print projects, or even other image files. To make your images work even better in editing projects and on the Web, you can now also edit the image's color profiles by clicking Edit Images⇒Edit Color. This step displays the image's color profile, an area in which Photoshop stores a color profile. (See "Understanding color profiles" earlier in this chapter for more on color profiles.) It enables you to adjust the color scheme for an image and access a series of color settings that can fix color problems and raise colors, as well as auto-correct colors as needed. Repurposing images on the Web Instead of simply using images in print projects, you can now use them on a Web page as well. You can also use them for E-mail and other types of campaigns. To access the image's properties in a browser window, right-click (or control-click on a Mac) the image and choose Properties from the context menu that appears. The Properties dialog box that opens enables you to modify the image's cropping and color settings. Here are some examples: Use the Page Setup dialog box to set up an image for a Web page or to print a hard copy of the image: Change the size, placement, and orientation of the image on a page. Click the drop-down menu next to the Size box and choose from the three options: Original, Fit to Page, and Fit to Device. The Original option lets you crop the image to the size required by the browser window. The Fit to Page option

Adobe Photoshop Elements vs. Adobe Photoshop for Web Designers With web design, you need a photo editing and converting tool that allows you to combine photos and logos and adjust the color of the design. Nos. 4,522,516; 4,554,849; 4,528,677; 4,565,986; 4,504,863; 4,604,788; 4,607,867; 4,661,711; 4,596,859; 4,611,278; 4,618,533; 4,642,462; 4,669,303; 4,662,127; and 4,781,697. Since the introduction of the Photographic Material Safety Guide (PSG) in January of 1986, to both encourage and enforce compliance, this guide and any associated products have been used by the public in making the right choices about storage, handling, disposition and use of photographic materials. A compelling initial motivation for the use of PSG products was that they insure the health and safety of photo lab personnel and consumers. To that end, PSG identification cards were provided to photo lab personnel so that they could inform customers of the inherent hazards of working with photographic materials. Unfortunately, despite this action and other educational measures, there has been an increase in consumer product failures, particularly when the chemicals are combined for the purpose of developing print-out paper. This, coupled with the fact that not all consumers know the proper guidelines for safe storage and use of photographic materials, has created an on-going consumer education problem. Since the advent of the PSG it has been realized by the manufacturers that a further deterrent to proper use of photographic materials was the need for the consumer to be made aware of the inherent hazards of mishandling or using photographic materials. PSG products included inexpensive plastic, peel-apart identification cards that were attached to printed material. They could be used for almost any category of photographic material including paper negatives, paper positives and paper prints. This invention teaches the use of inexpensive, adhesive-backed, high quality, full color photographic paper stock, which in conjunction with a PSG product, provides a visual and tactile presentation that allows consumers to evaluate the hazards of using photographic materials. Prior art U.S. Pat. No. 4,522,516 teaches an identification card comprising a plurality of layers adhered together. The layers comprise an index layer, an intermediate layer and a plurality of printed images. The layers adhere together via pressure sensitive adhesive. U.S. Pat. No. 4,611,278 teaches a packaging and handling system for photographs and negatives including a container

Volume of blood administered during cardiopulmonary bypass (CPB). Appropriate transfusion of blood products during cardiopulmonary bypass (CPB) is an important aspect of perioperative management that has received much attention over the past few years. This observational study reviewed the total volume of blood administered during CPB in patients undergoing open heart surgery with cardiopulmonary bypass (CPB). A two-year retrospective analysis of the data from two tertiary hospitals on a total of 418 patients undergoing open heart surgery with CPB identified 320 patients with complete data and were included in this study. Indications were coronary artery bypass graft (CABG) in 178 and valve surgery in 142 cases. Mean age was 62.5 years (range 13-85 years) and 81 (25%) were female. Mean extracorporeal circulation (ECC) time was 100.9+/-28.1 min (range 50-170 min). The total intra-operative blood loss was 2120.4+/-1721.7 ml (range 800-5200 ml). A total of 1,057.6+/-694.6 ml of packed red blood cells (PRBC) were administered intraoperatively. There were 6 (1.8%) patient deaths. The PRBC administration rate was inversely proportional to ECC time and was inversely proportional to blood loss. Using a logistic regression model, the following variables were found to be significant predictors of blood loss greater than 1500 ml: increasing age, female gender, ECC time longer than 130 min, number of coronary vessels grafted, age greater than 60 years, and type of surgery. A total of 1,057.6+/-694.6 ml of PRBC were administered intraoperatively. The rate of blood transfusion was inversely proportional to the ECC time and blood loss. Transfusion was administered more frequently in patients older than 60 years and in women.Squamous cell carcinoma of the lower lip and oral cavity: a review of pathology and prognosis. The classification of primary squamous cell carcinoma of the oral cavity is discussed, with particular emphasis on the differentiation of the verrucous, erythroplakic, and carcinoma in situ variants. These represent biologic spectrum of the "true" squamous cell carcinoma rather than histologic variants, although some authorities distinguish them as separate categories. The three types of verrucous carcinoma, the erythroplak
