database are appropriate for the actions performed and the environment in which the application executes. Unfortunately, some applications use, or may use, synchronized databases but do not use, or may not use, the system clock. An example of this situation is a system that may be configured to operate in time-sharing mode rather than real-time mode. Applications in such a system typically do not have timestamps associated with information in a synchronized database; therefore, those applications cannot take advantage of synchronized databases.

1. Field of the Invention This invention relates generally to an optical steering device which alters the trajectory of an incident beam, and particularly to such a device as used in a headlamp assembly to allow a vehicle to negotiate curves or to pass over any obstructions.

2. Description of the Prior Art Lighting devices of a type which direct light to a predetermined target is well known. Typically, lights are mounted in the front of a vehicle, which directs lights towards obstacles or towards the ground to direct light towards the ground to assist in driving. However, in situations such as passing over an obstacle or on a curve, there has been a need for steering the light beam towards a particular direction. This has been done in a number of ways. One known method for steering the light beam is to move the lights which are the source of the light. However, this is a difficult method in
