Roblox is a game-building platform that lets users program their own games. It is available on Windows, macOS, and Linux, Android, iOS, and HTML5, and it is playable across any of the devices and browsers supported by each respective platform. Roblox offers an editor for programming games in a visual interface, as well as a game-creation system that uses game engines to turn the programming output of the editor into playable games. The platform also features a system of in-game purchases known as the virtual currency, which can be used to power special in-game items called property items. The most commonly purchased property items include item libraries that are used to store purchased sounds, models, textures, and other assets, as well as gaming items that provide a variety of advantages. Roblox includes a system for allowing players to earn Robux by completing games and other activities, which can then be used to buy in-game property items or to unlock more content in the user's games. The user can also earn Robux by watching advertisements on Roblox. In addition, Robux can be acquired by making donations to Roblox charities, and they can be gifted to other players.
